in early 1954 Meduna was in charge of the clinic of mental diseases and neurology at the University of Budapest. is considered to be a brilliant brain surgeon. The disease poliomyelitis is most uncommon in Hungary as well as in other parts of central Europe. Consequently, very little polio research takes blace in Hungary. the polio virus was very mild and perhaps no sere virile than the flu virus with which we are confronted in the US. Consequently, the youth of the country develop an early immunity to this affliction. Many Hungarian physicians have neither seen nor treated a single case of polio. No more than 20 clinically diagnosed cases of polio secur throughout Hungary during an average year. In 1936-37 Hungary suffered row what was considered a polio epidemic. I clinically diagnosed 100 cases. Strangely, only adults had contracted polio. Of this group of 100, five died. Hunther disease which is exceptionally rare in Hungary is hepatitis.			
Clinic of mental diseases and neurology at the University of Budapest. Is considered to be a brilliant brain surgeon. The disease poliomyelitis is most uncommon in Hungary as well as in other parts of central Europe. Consequently, very little polio research takes place in Hungary.
